

SPList Export for SharePoint 2007

Export tool for Microsoft SharePoint

Product Overview

SPList Export for SharePoint 2007 (SPListX) is a powerful application to export document / picture library contents and associated metadata and list items, including associated file attachments to the Windows File System.

SPListX software exports SharePoint libraries, folders, documents, list items, version histories and metadata to the desired destination folder location in the File System.

The software supports Microsoft Office SharePoint Server 2007 / Windows SharePoint Services 3.0 environment and backward compatible with Microsoft SharePoint Portal Server 2003 / Windows SharePoint Services 2.0 environment.

Benefits

- Provides a simple solution to export folders / documents along with their associated metadata and list items along with their file attachments from SharePoint lists such as Tasks, Calendar, Contacts, Survey, Discussion Boards, Announcements, Links, Issue Tracking and Custom Lists.
- Exports from multiple SharePoint lists to file server or network shares or local computer
- Export SharePoint lists for offline collaboration or backup & restore purposes
- Export list metadata in multiple file formats for easy viewing, re-import to another DMS or perform an in-depth analysis in MS-Excel
- Maintain source folder structure and version history when exporting data from the SharePoint list
- Propagates original Created Date & Last Modified Date in SharePoint to the Windows File System fields for each folder / document
- Exports SharePoint's built-in fields, namely - Content Approval Status & related Comments, Content Type, Created Date, Modified Date, Created By and Modified By fields for each folder and list item in a SharePoint list to the metadata file

System Requirements

Hardware: Intel Pentium processor, 512 MB of RAM, 4 MB disk space to install SPListX.

Software: Windows XP (or) Windows Vista (or) Windows Server 2003 (or) Windows Server 2008 with the latest service packs and .NET Framework 2.0 or higher.

- Exports list items / documents / pictures based on user-defined data filter conditions constructed using SharePoint columns
- Automate export tasks through command-line or Windows Task Scheduler interface

Key Features

Export folders & documents and metadata

Export folders and files along with metadata and list items along with file attachments from multiple SharePoint lists to Windows File System in a single export task, based on the folders/files/list data exported by the user using the SPListX Explorer interface using the standard browse option or List View based filters.

Export SharePoint lists using a batch descriptor file

Export folders / documents along with metadata and list data along with file attachments from multiple SharePoint lists to the Windows File System in a single export task, based on the sequential line entries in the batch descriptor file.

Export SharePoint lists using the search option

Export folders, files and list items including attachments and associated metadata based on SharePoint search results at the site collection or entire farm level using the standard keywords or advanced search technique.

Tasks Manager

SPListX creates export tasks and maintains task history in a task oriented interface. Create a scheduled task or store the task settings and manually run the task on-demand. Keep track of all export tasks performed using SPListX. Task Manager internally uses the familiar Windows Task Scheduler to run export tasks at different time intervals - daily, monthly, weekly etc.

Automate Tasks

Run export tasks from the command line (DOS prompt) or automate to run in a scheduled manner using the Windows Task Scheduler interface.

Export SharePoint Columns

Exports all columns available in the source library, including SharePoint system columns such as Created, Modified, Approval Status, etc. SPListX exports metadata into Comma Separated Values (CSV), MS-Excel (XLS), MS-Access (MDB) format.

Export document versions

SPListX exports document version history to well organized user-defined version folders in the destination location and SharePoint list data version history to the metadata file in Windows File System. The list data file attachments can also be exported to the desired folder location in the file system.

Propagate folder / document system dates

Propagate the system date fields - Created Date and Last Modified Date to the respective folders and documents in the Windows file system
